In the compass model the four sectors, Mind, Spirit, Strength and Heart, not only contribute to your overall wellness, but also provide guidance on strategies to help build your compassion resilience. Strength is one of the sectors. Strength encompasses stress resilience and care for the body. Stress resilience allows us to maintain a non-anxious presence as we encounter the inevitable stressors of our job. Developing our ability to care for our bodies and listen to the signs that our bodies give us supports our whole health and minimizes any unhealthy responses to stress. Becoming stress resilient and caring for our bodies often require assistance from others. Help seeking is a key skill for both of the areas in the strength section of the Wellness Compass.

**Distribute this document to all participants to explore prior to the following application activities**

**Key Activity**
**Listening and Responding to Stress in Your Body (10-15 min)**

**Wellness Practice**
**Care for Body – Develop Your Plan (10-15 min)**

**Circle Agenda**
**Staff Circle Agenda, Section Ten**

**Core Content Visual**
**Choose Nourishing vs. Depleting! – Use this Visual and Display in Staff Break Areas**
Posting this visual in common staff areas will serve as a reminder of content covered to staff and perhaps serve as a future conversation started for deeper reflection among staff members.

**Supplementary Activities/Handouts**
**Identifying Nourishing vs. Depleting Activities (15-30min)**

Dr. Kelly McGonigal’s TED Talk on [How to Make Stress Your Friend](https://www.ted.com/talks/kelly_mcgonigal_how_to_make_stress_your_friend) explores a perspective shift on stress.

**For links to additional resources, please visit the Toolkit online**
In the compass model the four sectors, Mind, Spirit, Strength and Heart, not only contribute to your overall wellness, but also provide guidance on strategies to help build your compassion resilience. Strength is one of the sectors. Strength encompasses stress resilience and care for the body. Stress resilience allows us to maintain a non-anxious presence as we encounter the inevitable stressors of our job. Developing our ability to care for our bodies and listen to the signs that our bodies give us supports our whole health and minimizes any unhealthy responses to stress. Becoming stress resilient and caring for our bodies often require assistance from others. Help seeking is a key skill for both of the areas in the strength section of the Wellness Compass.

Stress is a normal aspect of life that we all feel and experience at times. Our bodies have many ways to send us signals that things are out of balance. Learning to be attuned to our body so we pick-up on the clues is a key skill needed to become stress resilient.

Our body sends warning signs when we are under stress. Some physical or emotional responses might include muscle tension, eating too much or too little, anger, irritability, insomnia, headaches, or a general lack of focus. Practicing mindfulness helps us to recognize these signs.

There are three questions to ask ourselves when our body is sending us those signals. First, ask ourselves “is it possible for me to avoid this situation right now?” While that often sounds like an easy yes or no answer, many people continue in situations that lead to high levels of stress and do not or cannot make the choice to walk away. If avoiding the cause of stress is not applicable, move to asking ourselves, “what might be another way of thinking about this situation?” Switching our perspective could help us to embrace any positives related to the stressor. This too can sound easy yet it requires willingness to give up the narrative that we have developed about the situation. Here’s a fascinating TED Talk by Kelly McGonigal on making stress our friend. This video was referenced in Section 7. If you didn’t get a chance to view it then, it may be helpful to view it now.

Finally, if we can neither avoid the situation nor change our perspective in a way that in turn reduces any negative impact of the stress, adjusting our lifestyle may be beneficial. Ask ourselves “what changes could I make to my lifestyle that could help minimize the impact of the stress I am feeling?” There are many strategies to help adapt our lifestyle to build our stress resilience.

Acceptance and Commitment Therapy (ACT) is a therapeutic approach that can inform our understanding of stress resilience. One aspect of ACT that is particularly relevant is the emphasis on acceptance. By mindfully accepting a feeling or thought we allow ourselves to feel the pain, naming it for what it is, “this is stress” or “this hurts,” without trying to change it in that moment. This gives us a bit of space needed to relate more positively to the stress. The practice of listening to and accepting the signs our body sends is important in our ability to be stress resilient.

When we take a moment to name and accept the reality of our uncomfortable feelings or thoughts, we are more likely to recognize that we have a choice of how we respond to a stressful situation. We have the opportunity to consider other strategies to help us approach the situation with a level of calm.

Consider this quote by Viktor Frankl, author of *Man’s Search for Meaning*:

“Between stimulus and response there is a space. In that space is our power to choose our response. In our response lies our growth and our freedom.”

In order to respond with a level of calm, despite the stressful situation, it is helpful to know our core values and to have clarified our goals. Knowing what is important to us will help guide our response in stressful situations. In the section on Spirit, we had the opportunity to develop a [Professional Mission Statement](#) (activity in preceding section: Spirit). Reflecting on our statement may give us guidance as we choose our response to situations that cause stress in our day-to-day work.

[This blog](#), from a well-respected resource on wellness and mindfulness, offers a summary of some of these ideas and a few others!

We know that physical movement has many benefits to our mind and bodies. As we consider building upon our stress resilience and caring for our body, research is profoundly clear that physical activity is important to our physical and mental health, emotional well-being, and ability to grow our stress resilience.

**Wellness and Resilience Strategies: Heart- Relationships and Emotions. The concept of self-compassion will be further explored.**
Activity: Listening and Responding to Your Body’s Stress Alarm

The human body is amazing and often recognizes that it is undergoing stress before you do mentally and it will give you signs. For example, you may have a hard time concentrating or making decisions, feel angry, irritable or out of control, or experience headaches, muscle tension or low energy. Everybody responds to stress differently, and becoming aware of the signs your body gives is one of the steps in becoming stress resilient. Take time to reflect on what your body is signaling to you in times of stress.

1. How does your body let you know that you are getting out of balance, heading into stress?

Often we adjust our habits related to caring for our body in response to stress. What patterns do you notice in the following three areas of your health habits?

2. What do you notice about your eating habits when you are stressed?

3. What do you notice about your physical exercise habits when you are stressed?

4. How about your sleep pattern?

As you review your answers, identify:

5. What responses to stress do you want to do more of to build your stress resilience?

6. What responses would you like to change?

Now that you have a list of some of the signals your body sends to notify that you are stressed, you can:

1. Recognize them in the future sooner so you are able to respond in a healthy manner
2. Develop a plan to address how you can adapt your lifestyle to be proactive with your stress resilience (See activity in this section of the toolkit: Care for Body)
Activity: Care for Body – Design Your Plan

Assessing how you care for your body allows you to identify the strengths of your current lifestyle and select from the vast array of wellness tools available to choose ones most likely to assist you towards your wellness goals. Listed here are a few resources to assist you in developing your wellness plan:

Develop a fitness plan
• The Mayo Clinic has tips on how to create a fitness plan.
• Consider using a mobile app to help track your progress, set goals, find plans, and receive motivation. Here is a resource that rates 25 fitness apps.

Find accountability partner(s)
• Having that extra motivation could be what you need to jump start your lifestyle change. This could be someone who simply encourages you to continue with your fitness or health goals, or someone with whom you exercise/eat well. Your accountability person could be a significant other, a co-worker, a family member or a friend. They even have online options to be accountable via mobile apps.

Keep a food journal
• This not only helps you to be mindful of what you are eating, but also to help navigate away from those unhealthy eating responses to stress.
• Use a journal, planner, or even your smart phone to help track what you are eating daily. This could range from simply documenting the foods you ate that day, to more in depth details of the quantity, calories and other nutrition information, and at what times of day. This article reviews 18 apps for tracking.

Meal prep
• Meal prepping at the beginning of your work week can help ensure you have healthy food options during the week.
• Here is a meal prep guide to get you started.

Sleep
• Most studies conclude that the average adult should be sleeping 7-9 hours a night. Finding what works for you, and knowing your body’s responses, will be key here.
Activity: Care for Body – Design Your Plan (continued)

Make your goals SMART

- When setting goals for your health, it can be very helpful if they are **Specific**, **Measurable**, **Attainable**, **Realistic**, and **Time-based** (SMART).
- Learn more about making your goals for lifestyle changes SMART.

Remember, incorporating new wellness practices into your life takes time. No one becomes an expert overnight. Consider reviewing your accomplishments weekly to help you recognize your successes and continue to work towards your goals.
## Staff Support Circle Agenda

### Circle Topic

<table>
<thead>
<tr>
<th>Planning</th>
<th>CR Section 10: Wellness and Resilience Strategies: Strength</th>
</tr>
</thead>
<tbody>
<tr>
<td>Planning</td>
<td>Send the <a href="#">introduction document</a> from Section 10 in the online toolkit at least 4 days prior to the circle to all participants.</td>
</tr>
</tbody>
</table>

### Purpose of Circle/ Learning Objectives

We are learning how to strengthen our stress resilience by developing additional ways to care for our bodies and listen for signs of stress to minimize unhealthy responses.

### Materials/Preparation/Time

- **Time:** 45-50 min
- **Materials:**
  - Circle kit
  - Values and shared agreements created in first session
  - Copies of the following for all participants: [Choose Nourishing vs. Depleting](#) handout and either the [Why it’s so hard for teachers to take care of themselves](#) article or the [5 principles of self-care for health professionals](#) article, and if doing bonus activity [Listening and Responding to Stress in Your Body](#)
- **Set-up:** Up to 15 chairs arranged in a circle without furniture in the middle

### Welcome/Check-In/Review (5 minutes)

“Put yourself at the top of your to-do list every single day, and the rest will fall into place.” — Unknown

(Talking piece) Given our previous session’s focus on our personal sense of purpose, did you have an experience since the last session that reinforced, reminded or reconnected you to that purpose?
## Wellness and Resilience Strategies: Strength

<table>
<thead>
<tr>
<th>Circle Topic</th>
<th>CR Section 10: Wellness and Resilience Strategies: Strength</th>
</tr>
</thead>
<tbody>
<tr>
<td>Grounding/Wellness Practice (5 minutes)</td>
<td>Ask participants to get into a comfortable position, take a few breaths, and focus in on this one activity. Take time to enjoy this article, <em>Why it’s so hard for teachers to take care of themselves</em> or <em>5 principles of self-care for health professionals</em> (facilitator selects whichever article is a better fit for the audience).</td>
</tr>
</tbody>
</table>

| Self-Care for CR, Part One and Guiding Questions (10 minutes) | *(Talking piece)* What is one statement from this article that resonated with you?  
*(Pair share)* Share a strategy from the article that you currently use or would like to practice. |

| Self-Care for CR, Part Two and Putting it into Practice (25 minutes) | Share: In our demanding lives, we can easily get caught in simply getting the tasks done and losing all enjoyment. We can get sucked into an “Exhaustion Funnel.”  
Share *Nourishing vs. Depleting handout*  
*(Pair share)* What job-related tasks does one of you find challenging, mindless or exhausting that the other enjoys, finds nourishing or gets excited about? Be sure to identify one thing that is nourishing for each person but depleting for the other. When you hold the depleting perspective, become curious about what your partner finds pleasurable about the task.  
*(Talking piece)* How has (or could) a perspective shift helped a mundane and depleting task become more enjoyable? |

| Closing (5 minutes) | Pass a fist bump around the circle.  
**Bonus Activity:** Handout for reflection between sessions *Listening and Responding to Stress in Your Body.* |
Choose Nourishing vs. Depleting!

In our demanding lives, we can easily get caught in simply getting the tasks done and losing all enjoyment. We can get sucked into an **Exhaustion Funnel**, a term coined by Marie Asberg, Karolinska Institute, Stockholm.

Our colleagues can help us transform depleting activities into more nourishing ones.

What activities do your colleagues find depleting that you do not?

Which do they seem to do without feeling exhaustion?

What are different ways your colleagues approach an activity that is typically depleting for you but not for them?
1. Take a few minutes to write down on a piece of paper the activities you do in your daily life (i.e., a typical work day). It might be helpful to start by thinking of what you do first thing in the morning and then end your list with getting into bed.

2. Once you have completed your list, decide whether each activity nourishes or depletes you. Indicate this by putting an N or D next to each activity. You might find that some activities are not so clearly either/or. For those that are sometimes nourishing and sometimes depleting place a B. For those that are neither, or neutral, you may leave blank.

At this point you might notice that a lot of your daily activities are draining, and not so many are nourishing. You may be able to find a healthier balance by increasing your nourishing and energizing activities and considering what draining and depleting activities you can change.

3. For those depleting activities on your list that you feel you can change, ask yourself: What could I do differently? When? How? With Who?

There are likely some depleting activities on your list that you find you cannot change or avoid. In this case, you might choose to change the meaning you give those activities.
Identifying Nourishing vs. Depleting Activities (continued)

4. For each depleting activity on your list you feel you cannot change or avoid, ask yourself:
   a. Is the meaning I am giving this activity fact or opinion?
   b. Is it really the voice of... (depression, anxiety, etc.) when I put meaning to it?
   c. What is another way of looking at this?
   d. Does this activity have a more meaningful purpose?

Choose Nourishing vs. Depleting!

In our demanding lives, we can easily get caught in simply getting the tasks done and losing all enjoyment. We can get sucked into an Exhaustion Funnel, a term coined by Marie Asberg, Karolinska Institute, Stockholm.

Our colleagues can help us transform depleting activities into more nourishing ones.

What activities do your colleagues find depleting that you do not?

Which do they seem to do without feeling exhaustion?

What are different ways your colleagues approach an activity that is typically depleting for you but not for them?
