As we have discovered in the previous sections of this toolkit, the goal of compassion resilience can be reached with the application of personal skills and perspectives combined with organizational policies and practices. In this section we will focus on the systemic factors that can negatively impact our compassion resilience and explore our response and potential role in making positive change.

We all work in imperfect systems. When we look outside of our own system to those that we rely on to provide for the health and well-being of the people we serve, we find more imperfection. The first step in lessening the negative impact of the systems in which we live and work is naming what it is about the systems that contributes to our compassion fatigue. The second step is to discover which items on that list we can change, which ones leadership can and will address, and which ones we would best be served by letting go.

Distribute this document to all participants to explore prior to the following application activities

**Key Activity**

**What Can I Control? Activity Write-Up**

**Toolkit Facilitators and Leadership Team, Please Review Prior to Implementing What Can I Control? Activity**

The following is a review of system factors that lead to compassion fatigue and those that are protective. Keep these factors in mind as you facilitate the combined staff and leadership activity, What Can I Control?, and if you are on the leadership team, use this information to prepare and respond to the activity.

**What Can I Control (Demo Video)**

Watch Sue McKenzie Dicks walk through the What Can I Control? activity with a group of staff. This video only includes Sue leading the Drivers of Fatigue portion of the activity. If you lead this activity, we encourage you to also include the Drivers of Resilience portion of the activity outlined in the circle agenda and activity directions below.

**Wellness Practice**

**SPIRIT: Humor and Core Values**

Reflect on what are you doing when you feel most alive – most like yourself?

The majority of people when asked this question do not immediately go to a situation at work, but rather a place outside of work where they feel most alive. If that's the case for you, when is a time at work when you feel most alive?
When you go home from your workday, do you have a tendency to share what happened in your day that left you feeling most alive or what was most draining? Our bodies experience the stress we relive in our conversation to some degree as if we were experiencing it again. Sharing the hard parts of our day may be needed to be understood and validated. We can become aware of when it moves from helpful to hurtful. We have a choice about how much time and on what we focus when talking about our work. One practice to play with is to include what made you feel most alive in your day as you talk with friends and family.

**Staff Circle Agenda, Section Four**

**Core Content Visual**

**System Drivers – Use this Visual and Display in Staff Break Areas**

Posting this visual in common staff areas will serve as a reminder of content covered to staff and perhaps serve as a future conversation started for deeper reflection among staff members.

**For links specifically for leadership and additional resources, please visit the Toolkit online**
As we have discovered in the previous sections of this toolkit, the goal of compassion resilience can be reached with the application of personal skills and perspectives combined with organizational policies and practices. In this section we will focus on the systemic factors that can negatively impact our compassion resilience and explore our response and potential role in making positive change.

We all work in imperfect systems. When we look outside of our own system to those that we rely on to provide for the health and well-being of the people we serve, we find more imperfection. The first step in lessening the negative impact of the systems in which we live and work is naming what it is about the systems that contributes to our compassion fatigue. The second step is to discover which items on that list we can change, which ones leadership can and will address, and which ones we cannot control for now and can drain our energy if they are too great a focus in our conversations.

**SPIRIT: Humor and Core Values**

Reflect on what are you doing when you feel most alive — most like yourself?

The majority of people when asked this question do not immediately go to a situation at work, but rather a place outside of work where they feel most alive. If that’s the case for you, when is a time at work when you feel most alive?

When you go home from your workday, do you have a tendency to share what happened in your day that left you feeling most alive or what was most draining? Our bodies experience the stress we relive in our conversation to some degree as if we were experiencing it again. Sharing the hard parts of our day may be needed to be understood and validated. We can become aware of when it moves from helpful to hurtful. We have a choice about how much time and on what we focus when talking about our work. One practice to play with is to include what made you feel most alive in your day as you talk with friends and family.

Chances are you came into a helping profession because you had a desire to make an impact on the world, or at least the person in front of you. In this short video by Kid President we can be inspired to connect back to that desire to make a change and enjoy some humor… both strategies to build compassion resilience.

**Self-care strategy MIND: Mindful compassion and self-compassion through hand movements**

**Expectations from Self and Others**

Leadership and Staff Activity

What Can I Control?

1. You can do this activity with a large group up to 30 people or divide into smaller groups. Prepare a large space for individuals to come forward to write their ideas for others to see. Have multiple markers ready for simultaneous writing. Divide the space in half and write Drivers of Fatigue at the top of the first half.

2. Invite staff and leaders to brainstorm on the first half of the space: What about the systems in which we work and the larger systems that set local, state and national policies and regulations has a negative impact on your ability to do your work from a base of compassion? Suggest that the board will be pretty full by the time they are out of ideas. As the facilitator, be patient for this activity to get started. Once people begin sharing the things that interfere with their ability to be positively focused, they will have many ideas. Sometimes it helps to have some items to give to the first brave folks who get the task started (stress balls, small chocolates, etc.).

3. Next ask them to brainstorm Drivers of Resilience on the other half of the space. Now write Drivers of Resilience at the top of that space.

4. Once the writing area is pretty full and the ideas have slowed, read out each item one-by-one and ask the group to identify if:
   a. They have little to no control over the item (strike through it)
   b. They believe that leadership could have some control over the item (mark with a large L)
   c. They have some level of control over it (circle it)

Do not worry if some have more than one such as, I have some control and my leadership team has some control. Mark those items both ways. Allow people to discuss their ideas on which best fits. Suggest that they think of control in a time frame such as in the next two years. For example, I can vote for another candidate in a few years yet the change I want to see will not likely come in the next few years. If there is disagreement, ask them to use dotted lines to cross out or circle.

5. Once the list is sorted as described in #3, suggest that the group look at those items that they have identified as not being able to control. Ask them to assess the percent of time when they come together as a team that they typically spend talking about these items. Too much? Not enough? What seems like the right percentage of time to allow for validation of the reality, but not too much to waste time? Then ask what they could do to remind each other to avoid giving time to that which they cannot control? One idea is to have a signal that colleagues give each other when they start into circular conversations about things that will not change in the near future.

6. Next, look at the list that the group thought leadership might be able to control. Ask the leaders in the room if they would commit to looking at the list in the near future and get back to the staff with:
   a. What they will spend time on in the next year or two
   b. What they want more information on from the staff
   c. What they will not address in the next year or two
The Leadership team should be prepared to discuss items the staff designated to “leadership control” and report back to the staff which items the team would be exploring this year or next and which items would not change in the near future. Consider the three-tiered approach described in the information area of this section. Reporting plans back to the staff allows the staff to add the items the leadership team will not address to their “cannot control” list. It is most helpful to express willingness to look at those items in the future unless there is no possibility of change. Let the staff know that progress on the items the team has chosen to address will be shared throughout the year.

7. Ask the group to discuss in pairs, the steps they would like to take this year in one or two areas that they identified as under their control.

8. Close the activity by letting the group know that the next section will look at expectations that we have of ourselves and others have of us. Suggest that clarifying expectations is an important aspect of letting go and exercising our control. In addition, the content of the Mind section will address growing our self-awareness and challenging our thoughts. Again, these are skills that support our ability to let go of what we cannot control to avoid the weight of those things dragging on our effectiveness and compassion. Do this hand gesture exercise.
For Toolkit Facilitators and Leadership:

Health care providers are at risk for compassion fatigue through their continued exposure to the suffering and trauma of their clients as well as to burnout due to the organizational stress that exists within the health care system. The effects of stress and trauma exposure are increasingly viewed as an ‘occupational hazard’ in the field of health care. Research on the topic shows that nearly 60% of physicians surveyed report symptoms of burnout, and 33% of new registered nurses seek another job within the first year. In studies of mental health providers (from psychiatrists to social workers to case managers), between 21-67% experience high levels of burnout, including high emotional exhaustion and depersonalization, with worse rates for those working in community-based settings.

It is clear that the health care profession is ripe with both inherent and external rewards and stresses. Both types of stresses can lead to compassion fatigue whereas the rewards can serve to protect against compassion fatigue. Research, however, posits that external, system factors play a bigger role in provider well-being and compassion fatigue than internal factors. So much so that when external, system factors become so overwhelming, it is not enough to tell individuals to simply become more resilient. It is, therefore, imperative for us, but particularly for leaders, to distinguish between inherent and external stresses and address them accordingly. The key is to balance these stresses and rewards.

The following is a review of the rewards and stresses that are inherent in caring for clients as well as external to caregiving. Keep these in mind as you engage in the upcoming staff activity, What Can I Control?

Inherent Rewards & Stresses: The very nature of providing care to others who may be suffering is simultaneously satisfying and draining. It is a source of both rewards and stresses which are inextricably connected, meaning you cannot remove one without changing the nature of the provider role.

External Rewards & Stresses: These rewards and stresses arise outside of providing care for clients, are not connected to some reward with a deeper meaning, and make many providers say “I did not sign up for this.” Much of this type of stress is related to the financial and regulatory aspects of health care, such as documentation and electronic medical records, as well as poor management and teamwork, a toxic culture, and disruptive peer behavior.

Take a moment to think about the inherent and external rewards and stresses in your work. The table below (from Mylod, 2017) lists some common sources of rewards and stresses within the health care field. Consider which are present in your work and whether the related statements resonate with you.

- Is there a balance of stresses and rewards that are either inherent to the experience of caring for clients or external to it, arising from the work environment?
- Knowing that inherent rewards and stresses are intertwined, how could the inherent rewards in your work be amplified? How might the impact of inherent stresses be reduced?
- If you disagreed with any of the statements, what could be changed in your work environment to allow you to agree. Imagine (with as much detail as possible) what that environment would look like? Would you interact with colleagues differently? Would your day-to-day be changed?

### Welcome/Check-In

**(5 minutes)**

“Incredible change happens in your life when you decide to take control of what you do have power over instead of craving control over what you don’t.” — Steve Marboli

(Talking piece) What is something from your childhood that as a child you wished you had control over that now as an adult you do?
## Circle Topic

### Grounding/Wellness Practice (5 minutes)

(Pair Share) **What are you doing when you feel most alive – most like yourself?**

After 2 minutes, bring the group back and discuss these points:

- Raise your hand if you shared a situation of being at work (most will not).
- Think about what that means for how well we know our colleagues.
- Think of when you feel most alive at work.
- When you go home from your workday, do you have a tendency to share what happened in your day that left you feeling most alive or what was most draining?
- Our bodies experience the stress we relive in our conversations to some degree as if we were experiencing it again. Sharing the hard parts of our day may be needed to be understood and validated. We can become aware of when it moves from helpful to hurtful. We have a choice about how much time and on what we focus when talking about our work. One practice to play with is to include what made you feel most alive in your day as you talk with friends and family.

---

## Review (5 minutes)

**Share:** We have looked at what compassion in action looks like, some of the challenges we face in those steps (such as engaging people in deciding their next best steps based on their strengths and available resources), and how fatigue develops through the cat’s cycle. Today we will look one more time at fatigue to gain some insights into the drivers of fatigue that are specific to this team as well as what drives resilience.

---

## Guiding Questions (20 minutes)

**What Can I Control Activity**

**Explain:** Identifying drivers of fatigue can broaden our self-awareness of what we CAN do and identifying drivers of resilience can do the same.

1. (Talking piece) Think about all you do in your work and the systems in which we work, the ones serving youth and families and the larger systems responsible for setting local, state and national policies. What about your work and the systems within which you work have a negative impact on your ability to do your work with compassion? As the group brainstorms their thoughts, the circle keeper will record what people say on flipchart paper. The talking piece will go around the circle multiple times (if time allows) so when you have no additional ideas to add just pass the talking piece to the person next to you.

2. Re-do step 1, but ask (Talking piece) What about your work and the systems you work in have a positive impact on your ability to do your work with resilience?
### System Drivers of Compassion Fatigue

#### Guiding Questions (20 minutes) (continued)

3. Once the two lists have been created explain that each item will be read aloud. Participants can show with their hands if they feel the item is: closed fist — one they feel they have no control over or open hand — could have some control over it. When they look to leadership of their organization to have some control over the item read, use their other hand to make an L for leadership. Explain that control should be something that could be accomplished in the next two years (i.e. I can vote for a new candidate in the next election, but their policies would not take affect for multiple years.) If a majority of participants give the item a fist — strike through it, an open hand — circle it, L — mark it with a large L. Allow there to be some discussion if people have more than one idea for the same item and items can be marked with dotted lines when there is variance. You can vote for control or no control from your perspective AND L for your thoughts on leadership control.

4. Another approach to this activity is giving everyone a marker and asking them to write on the flipcharts directly.

5. Ask administration if they would be willing to look at the items with which participants felt leadership has some control over and would commit to looking at the list and reporting back to the circle if any of the items are things leadership will spend time on in the next 1-2 years, which items they would like more staff feedback on and which items they will not be addressing in the next couple of years.

#### Putting it into Practice (10 minutes)

1. (Popcorn) **What percentage of time does your team or sub-set spend discussing the things they cannot control when they are together?**

2. (Popcorn) **What percentage seems healthy for your team?**

3. (Popcorn) **How can you identify to your team members when the group has gone over that percentage?**

#### Closing (5 minutes)

Hand movements activity from Section 4 in the Toolkit. **Share** the statements below.

- Hold your hands out and squeeze them into fists. (Hold for at least 30 seconds and invite participants to close their eyes for the rest of the activity.) This may be akin to feeling fatigue.

  — Think about what emotions arise as you close your fists. This is a metaphor for resistance – what it feels like when we fight rather than accept our current reality. Resistance can be helpful if it leads us to discover where we might have some level of control. Yet, staying in the place of resistance can be unproductive and fatiguing.
System Drivers of Compassion Fatigue

Closing (5 minutes) (continued)

• Now, bring your elbow to your side, open your hands and turn your palms upward.
  — Think about what emotions arise for you. This is a metaphor for mindfulness, what it feels like when we are present and open to ourselves, our experiences and the changes we are faced with.

• Now extend your palms and your arms forward.
  — Think about how this makes you feel. This is a metaphor for common humanity — what it feels like when we reach beyond ourselves and welcome and include others. In our vulnerability we discover the common aspects of humanity and can form bonds with others. We can act with compassion.

• Now place one hand in the other with both palms facing upward. Slowly bring them to your chest. Feel the warmth and gentle pressure. Breath naturally.
  — Reflect on your feelings during this last step. This symbolizes self-compassion. Caring for ourselves is the foundation that supports our compassion for others and helps us find comfort in our common humanity.

Bonus Activity: Test it out! Suggest again that the participants practice sharing something that made them feel alive in their workday with someone outside of work at least once each day until the next session. Ask that they observe the listener’s reaction and their own.
System Drivers:
What is driving compassion fatigue in this organization?
System Drivers:
What drives compassion resilience in this organization?
