As we have discovered in the previous sections of this toolkit, the goal of compassion resilience can be reached with the application of personal skills and perspectives combined with organizational policies and practices. In this section we will focus on the systemic factors that can negatively impact our compassion resilience and explore our response and potential role in making positive change.

We all work in imperfect systems. When we look outside of our own system to those that we rely on to provide for the health and well-being of our students and their families, we find more imperfection. The first step in lessening the negative impact of the systems in which we live and work is naming what it is about the systems that contributes to our compassion fatigue. The second step is to discover which items on that list we can change, which ones leadership can and will address, and which ones we would best be served by letting go.

**Distribute this document to all participants to explore prior to the following application activities**

### Key Activity
**What Can I Control? Activity Write-Up**

**Toolkit Facilitators and Leadership Team, Please Review Prior to Implementing What Can I Control? Activity**
The following is a review of system factors that lead to compassion fatigue and those that are protective. Keep these factors in mind as you facilitate the combined staff and leadership activity, What Can I Control?, and if you are on the leadership team, use this information to prepare and respond to the activity.

**What Can I Control (Demo Video)**
Watch Sue McKenzie Dicks walk through the What Can I Control? activity with a group of staff. This video only includes Sue leading the Drivers of Fatigue portion of the activity. If you lead this activity, we encourage you to also include the Drivers of Resilience portion of the activity outlined in the circle agenda and activity directions below.

**Wellness Practice**
**SPIRIT: Humor and Core Values**
Reflect on what are you doing when you feel most alive – most like yourself?

The majority of people when asked this question do not immediately go to a situation at work, but rather a place outside of work where they feel most alive. If that’s the case for you, when is a time at work when you feel most alive?
When you go home from your workday, do you have a tendency to share what happened in your day that left you feeling most alive or what was most draining? Our bodies experience the stress we relive in our conversation to some degree as if we were experiencing it again. Sharing the hard parts of our day may be needed to be understood and validated. We can become aware of when it moves from helpful to hurtful. We have a choice about how much time and on what we focus when talking about our work. One practice to play with is to include what made you feel most alive in your day as you talk with friends and family.

One practice to play with is to include what made you feel most alive in your day as you talk with friends and family.

Expectations from Self and Others

Developed in partnership with:

compassionresiliencetoolkit.org
**Leadership and Staff Activity**

**What Can I Control?**

1. You can do this activity with a large group up to 30 people or divide into smaller groups. Prepare a large space for individuals to come forward to write their ideas for others to see. Have multiple markers ready for simultaneous writing. Divide the space in half and write Drivers of Fatigue at the top of the first half.

2. Invite staff and leaders to brainstorm on the first half of the space: What about the systems in which we work, ones serving youth and families, and the larger systems that set local, state and national policies has a negative impact on your ability to do your work from a base of compassion? Suggest that the board will be pretty full by the time they are out of ideas. As the facilitator, be patient for this activity to get started. Once people begin sharing the things that interfere with their ability to be positively focused, they will have many ideas. Sometimes it helps to have some items to give to the first brave folks who get the task started. (stress balls, small chocolates, etc.)

3. Next ask them to brainstorm Drivers of Resilience on the other half of the space. Now write Drivers of Resilience at the top of that space.

4. Once the writing area is pretty full and the ideas have slowed, read out each item one-by-one and ask the group to identify if:
   a. They have little to no control over the item (strike through it)
   b. They believe that leadership could have some control over the item (mark with a large L)
   c. They have some level of control over it (circle it)

   Do not worry if some have more than one such as, I have some control and my leadership team has some control. Mark those items both ways. Allow people to discuss their ideas on which best fits. Suggest that they think of control in a time frame such as in the next two years. For example, I can vote for another candidate in a few years yet the change I want to see will not likely come in the next few years. If there is disagreement, ask them to use dotted lines to cross out or circle.

5. Once the list is sorted as described in #3, suggest that the group look at those items that they have identified as not being able to control. Ask them to assess the percent of time when they come together as a team they typically spend talking about these items. Too much? Not enough? What seems like the right percentage of time to allow for validation of the reality but not too much to waste time? Then, ask could they do to remind each other to avoid giving time to that which they cannot control? One idea is to have a signal that colleagues give each other when they start into circular conversations about things that will not change in the near future.

6. Next look at the list that the group thought leadership might be able to control. Ask the leaders in the room if they would commit to looking at the list in the near future and get back to the staff with:
   a. what they will spend time on in the next year or two
   b. what they want more information on from the staff
   c. what they will not address in the next year or two
The Leadership team should be prepared to discuss items the staff designated to “leadership control” and report back to the staff which items the team would be exploring this school year or next and which items would not change in the near future. Consider the three-tiered approach described in the information area of this section. Reporting plans back to the staff allows the staff to add the items the leadership team will not address to their “cannot control” list. It is most helpful to express willingness to look at those items in the future unless there is no possibility of change. Let the staff know that progress on the items the team has chosen to address will be shared throughout the year.

7. Ask the group to discuss in pairs, the steps they would like to take this year in one or two areas that they identified as under their control.

8. Close the activity by letting the group know that the next section will look at expectations that we have of ourselves and others have of us. Suggest that clarifying expectations is an important aspect of letting go and exercising our control. In addition, the content of the Mind section will address growing our self-awareness and challenging our thoughts. Again, these are skills that support our ability to let go of what we cannot control to avoid the weight of those things dragging on our effectiveness and compassion. Do this hand gesture exercise.
For Toolkit Facilitators and Leadership Team Only:

The following is a review of system factors that lead to compassion fatigue and those that are protective. Keep these factors in mind as you facilitate the combined staff and leadership activity below, What Can I Control?, and if you are on the leadership team, use this information to prepare and respond to the activity.

These are summarized from the research reported in: Advances in School Mental Health Promotion: Caringi et. all: Secondary traumatic stress in public school teachers: contributing and mitigating factors. Jan 2012.

Educators are at risk for compassion fatigue through their continued exposure to the students’ trauma narratives as well as to burnout due to the organizational stress inherent in an educational system. The effects of stress and trauma exposure are increasingly viewed as an ‘occupational hazard’ in the field of education. Younger professionals (fewer years in the field) are more at risk to the negative impact of stress. Of the educators interviewed for this research, 75% had thoughts of changing careers, moving to a different school settings, or retiring… all due to work-related stress.

Types of System Stress

Colleague Stress: Educators report stress when needing to work with peers regarding – lack of professional commitment, lack of experience with the students who may have difficult behaviors, inconsistency in dealing with disciplinary issues, inconsistency in applying rules, and feeling ‘excluded from group and community decisions’ within the school.

Organization Stress: Over 80% of identified educator stress relates to organizational characteristics, such as class load size, school environment management, lack of productive supervision, role overload, long hours, no planning time, and dealing with behavioral conflicts. Many of these are areas that educators typically have little control over.

More on Class Size: Larger class sizes were described as difficult: difficult to build connections with students, student behavior is negatively affected, limited ability to effectively cover all educational material, increased time dedicated to managing student behaviors. Smaller classrooms give educators the flexibility to provide individuals with more attention (academically and behaviorally).

Community Stress: (added by toolkit authors) The systems schools turn to in hopes of linking students and families to needed services often are unable to deliver high quality, timely services due to their own systemic barriers and large scale events that simultaneously impact the majority of a community such as community violence, social discrimination, natural disasters, unemployment, etc., which are events that can affect them personally, as well as the students and families with whom they work.
Protective Factors Impacted by Effective Leadership Practices

Sense of Competence: Feeling successful with students and having more control of the classroom decisions. (This will also be addressed in Section 8 of the Toolkit – Mind)

Educator Support Systems: Educators identify other educators as their primary source of support, yet none felt comfortable admitting stress or difficulties to administration. Social support is among the strongest mitigating factors against secondary trauma. The simple act of having time to discuss work-related stress with colleagues is most effective in reducing symptoms. Social support has been shown to buffer a myriad of stress outcomes and is among the first line of intervention recommendations. (This will also be addressed in Section 11 of the Toolkit – Heart)

Supervision: Putting emphasis on supporting educators and helping them meet their needs with specific recommendations is most the effective supervision (especially related to new educators). Set aside some supervision time to build an individual self-care plan that can be monitored for progress over a length of time. Effective supervision that goes beyond focusing on administrative tasks, can contribute to positive outcomes such as job satisfaction, organizational commitment, and educator retention. Educators with high levels of STS benefit from a more intense tier of mentorship or perhaps individualized treatment provided by an outside agency resource (EAP).

Creating a Climate of Support: Creating a climate of support for stress and STS mitigation that is flexible and responsive to staff cultural diversity prevents hierarchical mechanisms that ultimately contribute to STS levels. It is recommended that institutional mechanisms for peer-to-peer discussion and consultation on work-related stress would support prevention and mitigation of stress and STS in the educational setting. (This will also be addressed in Section 7 of the Toolkit– Contract for Positive Staff Culture.)

Recommendations:
Based on the PBIS model, future school-based initiatives to address stress and STS would benefit from developing programs according to a collaborative, team-based approach. Specifically, three levels of intervention are recommended: Universal (Tier I) for all educators (especially newer), Secondary (Tier II) for those impacted by stress and STS at moderate levels, and Tertiary (Tier III) for those with the most extreme levels of STS. (The Compassion Resilience Toolkit is design for tier one and two interventions.)

Tier I: Interventions may include education on compassion fatigue and its correlates, as well as an introduction to self-care and system supports. There should also be education for administration on the impact of organizational stress, compassion fatigue, and encouraging their staff members to speak openly about the difficulties that they may be having related to their work-related stress and actions to become compassion resilient.

Tier II: Interventions may include more structured opportunities to discuss work-related stress with coworkers, in order to buffer against some of the specific negative effects of compassion fatigue in the school. These may include the development of ‘personal,’ ‘professional,’ and ‘organizational’ plans to build compassion resilience.

Tier III: Interventions may include providing referral sources and encouragement to seek a health care professional, take time off of work, and other personal means to get well. Included should be addressing the importance of supervision at the organizational, professional, and personal levels. Renewal and recovery is possible.

### Circle Topic

**Grounding/Wellness Practice**

(Pair Share) What are you doing when you feel most alive – most like yourself?

After 2 minutes, bring the group back and discuss these points:

- Raise your hand if you shared a situation of being at work (most will not).
- Think about what that means for how well we know our colleagues.
- Think of when you feel most alive at work.
- When you go home from your workday, do you have a tendency to share what happened in your day that left you feeling most alive or what was most draining?
- Our bodies experience the stress we relive in our conversations to some degree as if we were experiencing it again. Sharing the hard parts of our day may be needed to be understood and validated. We can become aware of when it moves from helpful to hurtful. We have a choice about how much time and on what we focus when talking about our work. One practice to play with is to include what made you feel most alive in your day as you talk with friends and family.

### Review

(Pair Share) We have looked at what compassion in action looks like, some of the challenges we face in those steps (such as engaging people in deciding their next best steps based on their strengths and available resources), and how fatigue develops through the cycle. Today we will look one more time at fatigue to gain some insights into the drivers of fatigue that are specific to this team as well as what drives resilience.

### Guiding Questions

**What Can I Control Activity**

**Explain:** Identifying drivers of fatigue can broaden our self-awareness of what we CAN do and identifying drivers of resilience can do the same.

1. (Talking piece) Think about all you do in your work and the systems in which you work, the ones serving youth and families and the larger systems responsible for setting local, state and national policies. What about your work and the systems within which you work have a negative impact on your ability to do your work with compassion? As the group brainstorms their thoughts, the circle keeper will record what people say on flipchart paper. The talking piece will go around the circle multiple times (if time allows) so when you have no additional ideas to add just pass the talking piece to the person next to you.

2. Re-do step 1, but ask (Talking piece) What about your work and the systems you work in have a positive impact on your ability to do your work with resilience?
System Drivers of Compassion Fatigue

Guiding Questions
(20 minutes)
(continued)

3. Once the two lists have been created explain that each item will be read aloud. Participants can show with their hands if they feel the item is: closed fist — one they feel they have no control over, open hand — could have some control over it, and, with the other hand, make an L for leadership — meaning they look to leadership of their organization to have some control over it. Explain that control should be something that could be accomplished in the next two years (i.e. I can vote for a new candidate in the next election, but their policies would not take affect for multiple years.) If a majority of participants give the item a fist — strike through it, an open hand — circle it, L — mark it with a large L. Allow there to be some discussion if people have more than one idea for the same item and items can be marked with dotted lines when there is variance. You can vote for control or no control from your perspective AND L for your thoughts on leadership control.

4. Another approach to this activity is giving everyone a marker and asking them to write on the flipcharts directly.

5. Ask administration if they would be willing to look at the items with which participants felt leadership has some control over and would commit to looking at the list and reporting back to the circle if any of the items are things leadership will spend time on in the next 1-2 years, which items they would like more staff feedback on and which items they will not be addressing in the next couple of years.

Putting it into Practice
(10 minutes)

1. (Popcorn) What percentage of time does your team or sub-set spend discussing the things they cannot control when they are together?

2. (Popcorn) What percentage seems healthy for your team?

3. (Popcorn) How can you identify to your team members when the group has gone over that percentage?

Closing
(5 minutes)

Hand movements activity from Section 4 in the Toolkit. Share the statements below.

- Hold your hands out and squeeze them into fists. (Hold for at least 30 seconds and invite participants to close their eyes for the rest of the activity.) This may be akin to feeling fatigue.

  — Think about what emotions arise as you close your fists. This is a metaphor for resistance – what it feels like when we fight rather than accept our current reality. Resistance can be helpful if it leads us to discover where we might have some level of control. Yet, staying in the place of resistance can be unproductive and fatiguing.
### Closing (5 minutes) (continued)

- Now, bring your elbow to your side, open your hands and turn your palms upward.  
  - Think about what emotions arise for you. This is a metaphor for mindfulness, what it feels like when we are present and open to ourselves, our experiences and the changes we are faced with.

- Now extend your palms and your arms forward.  
  - Think about how this makes you feel. This is a metaphor for common humanity — what it feels like when we reach beyond ourselves and welcome and include others. In our vulnerability we discover the common aspects of humanity and can form bonds with others. We can act with compassion.

- Now place one hand in the other with both palms facing upward. Slowly bring them to your chest. Feel the warmth and gentle pressure. Breath naturally.  
  - Reflect on your feelings during this last step. This symbolizes self-compassion. Caring for ourselves is the foundation that supports our compassion for others and helps us find comfort in our common humanity.

**Bonus Activity:** Test it out! Suggest again that the participants practice sharing something that made them feel alive in their workday with someone outside of work at least once each day until the next session. Ask that they observe the listener’s reaction and their own.
System Drivers:
What is driving compassion fatigue in this school?
System Drivers:
What drives compassion resilience in this school?
